DETAILED ACTION

Drawings

1. The drawings are objected to because the text label " $V_{in} = V_{FILTN} - V_{FILTN}$ " in Fig. 1b is incorrect, i.e., it should be -- $V_{in} = V_{FILTP} - V_{FILTN}$ --. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because:

- (i) it uses words which can be implied, i.e., "comprised",
- (ii) it has more than 150 words.

Correction is required. See MPEP § 608.01(b).

Claim Objections

3. Claims 1-2 are objected to because of the following informalities:

Art Unit: 2816

In claim 1, line 22, "bias voltage and;" should be changed to -- bias voltage; and --.

In claim 2, line 2, "said voltage bias" should be changed to -- said bias voltage --.

Appropriate correction is required.

Allowable Subject Matter

4. Claims 1-2 are allowed after the objections noted herein above are corrected.

Claims 1-2 are allowed because the prior art of record fails to disclose or suggest the inclusion of a fifth transistor connected as recited in claim 1. The inclusion of the fifth transistor configured as recited defines patentability over the prior art of record because it ensures the two transistors configured as half cascode current mirror are simultaneously saturated, and therefore, if used in a PLL, jitter is reduced.

Conclusion

5. This application is in condition for allowance except for the formal matters noted herein above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
